

## A Petition to the Local Governing Bodies of James Island SC

**Whereas**, Studies of intersections in the United States converted from traffic signals or stop signs to roundabouts have found reductions in injury crashes of 72-80 percent and reductions in all crashes of 35-47 percent.

**Whereas**, Roundabouts are a safer alternative to traffic signals and stop signs and the tight circle of a roundabout forces drivers to slow down.

**Whereas**, Roundabouts improve traffic flow and are better for the environment. Research shows that traffic flow improves after traditional intersections are converted to roundabouts. Less idling reduces vehicle emissions and fuel consumption.

**Whereas**, Roundabouts generally are safer for pedestrians because Pedestrians walk on sidewalks around the perimeter and cross only one direction of traffic at a time.

**Therefore, We the People of James Island** support the Roundabout at the intersection of Ft. Johnson Rd and Camp Rd and other places on the Island.
